# NIKKO AM GROWTH STRATEGY

Assets are held in the Nikko AM Wholesale NZ Growth Fund. The Nikko AM Growth Fund (retail) and Nikko AM KiwiSaver Scheme Growth Fund invest in units in the wholesale fund, which the commentary refers to.

## Market Overview

- Bond markets continued to be the focus of much attention during March as interest rates continued their push higher resulting in 'mark-to-market' losses for bond funds (ie when interest rates move higher, your holdings of older bonds with a lower interest rate are worth less).
- The NZ dollar, perhaps surprisingly in a 'risk off' environment strengthened appreciably over the month resulting in enhanced returns for foreign currency investments that were hedged back to the NZ dollar.

## Fund Highlights

- With the strong returns from equities generally, the fund provided a reasonable return for the month notwithstanding that the ARK fund had another negative month losing around a third of its value since the start of the year. The Option Fund also faced losses due to the rapid increase in US interest rates upon which the option contracts are written.
- Day-to-day volatility remains elevated across all sectors and serves as a reminder that good diversification is an important aspect of portfolio construction.

## Market Commentary

Bond markets continued to be the focus of much attention during March as interest rates continued their push higher resulting in 'mark-to-market' losses for bond funds (ie when interest rates move higher, your holdings of older bonds with a lower interest rate are worth less). The move upwards in interest rates comes from both investor expectation that central banks will continue to increase their base rate for lending (e.g. the OCR in NZ) and linked to this, that investors demand a higher interest rate to compensate for the erosion of value from inflation. How much higher interest rates will continue to climb is a matter of some debate, but we expect that some of the recent momentum will subside and that rates will stabilise around these levels but the risk is to the upside (ie if rates don't stabilise then we expect they will be rising further rather than falling). Equity markets were generally strong globally, and the NZ market also rose, though not quite as strongly, with a return of 1.4% over March. This late uptick in March has meant that the return from equities in the first quarter of the year is less severe than it might have been. The NZ dollar, perhaps surprisingly in a 'risk off' environment strengthened appreciably over the month resulting in enhanced returns for foreign currency investments that were hedged back to the NZ dollar.

## Fund Commentary

With the strong returns from equities generally, the fund provided a reasonable return for the month notwithstanding that the ARK fund had another negative month losing around a third of its value since the start of the year. The Option Fund also faced losses due to the rapid increase in US interest rates upon which the option contracts are written. Day-to-day volatility remains elevated across all sectors and serves as a reminder that good diversification is an important aspect of portfolio construction. As we finalise this year's strategic asset allocation review we note that the higher interest rate environment will ultimately lead to higher expected returns over time, albeit that the journey will continue to provide significant jolts both upwards and downwards especially in equity markets. We remain firmly of the view that equities will outperform bonds over the longer term and that bonds will outperform cash, but that the more defensive sectors still have a role to play in the overall portfolio.
